

Conold Thando Chisinahama

Full-Stack Software Developer | Customer Success Lead

Johannesburg, South Africa | +27 82 886 8556 | cthandoc@gmail.com
conold-portfolio.vercel.app | linkedin.com/in/conold | github.com/thvndx

PROFILE

Full-stack software developer building TypeScript applications, API integrations and analytics tools used by a four-person support operation and adjacent departments. Owns product definition, implementation, testing and deployment, drawing on customer-success leadership to solve operational problems.

TECHNICAL SKILLS

Development: TypeScript, JavaScript, React, Next.js, Node.js, Python, PostgreSQL

Delivery: REST APIs, Supabase, Vitest, Playwright, GitHub Actions, Railway, Vercel

EXPERIENCE

Customer Success Lead | Connectivity and e-commerce business

January 2023 - Present | Remote / Johannesburg

- Built and deployed full-stack tools for customer context, quality review and performance reporting, adopted across the full support team and adjacent departments.
- Integrated support, call and commerce data into a customer workspace, reducing context gathering from approximately 20 minutes to 30 seconds per interaction.
- Automated KPI report generation and QA selection/compilation, reducing each workflow from approximately two hours to about one minute while retaining human review.
- Implemented explicit identity review, independent access controls and data-freshness states to prevent ambiguous or incomplete data from driving unsafe decisions.
- Lead two direct reports within a four-person operation; maintain measured email response and callback times below two hours and customer satisfaction above 80%.

SELECTED PRODUCT WORK

Support Quality Platform: TypeScript, React, Node.js, PostgreSQL, OpenAI. Built evidence-backed conversation scoring, sampling and manager reporting with separate manual and automated permissions.

Customer Operations Workbench: TypeScript, React, Node.js, PostgreSQL, Redis. Integrated Front, Shopify and Aircall with bounded caching and explicit review of conflicting customer matches.

Operations Performance Hub: TypeScript, React, PostgreSQL. Separated raw activity from KPI eligibility and added persisted, budget-aware provider synchronization.

Recalibrate: React Native, Expo. Built a local-first planning MVP with adaptive scheduling and supervised guidance.

EARLIER EXPERIENCE AND EDUCATION

Technical Sales and Support, 2020-2023 | Technician, 2019 | Technical Sales Consultant, 2015-2017

National Diploma in Business Information Technology, University of Johannesburg, 2014-2018
