

Conold Thando Chisinahama

Full-Stack Software Developer | Customer Success Lead

Johannesburg, South Africa | +27 82 886 8556 | cthandoc@gmail.com | linkedin.com/in/conold | github.com/thvndx

PROFILE

Full-stack software developer with a customer-success foundation, building secure operational products from problem definition through deployment. Leads a four-person support operation, with two direct reports, while delivering internal AI, analytics and workflow tools adopted across the team and adjacent departments.

TECHNICAL SKILLS

Engineering: TypeScript, React, Next.js, Node.js, Python, PostgreSQL, Supabase

Delivery: API integrations, data modeling, automation, testing, GitHub Actions, Railway, Vercel

Product: Product discovery, operational analytics, customer-success systems, AI-assisted development

EXPERIENCE

Customer Success Lead | Connectivity and e-commerce business

January 2023 - Present | Remote / Johannesburg

- Lead two direct reports within a four-person support operation spanning customer communication, technical escalation, call queues and shared inboxes.
- Maintain measured email response and callback times below two hours, with CSAT above 80%.
- Define, build, test and deploy internal full-stack products for customer context, quality assurance, experience analysis and performance reporting.
- Reduced customer-context gathering from approximately 20 minutes to 30 seconds per interaction by consolidating fragmented provider data.
- Reduced KPI report generation and QA selection/compilation from approximately two hours to about one minute while retaining human review.
- Drove adoption across all four support agents and adjacent departments; reduced recurring software costs through vendor negotiation and provider changes.

SELECTED PRODUCT WORK

Support Quality Platform: AI-assisted, evidence-backed conversation QA with explicit manual, automation and reporting controls.

Customer Operations Workbench: Unified customer context across support, call and commerce systems with fail-closed identity review.

Operations Performance Hub: Provider-backed KPI reporting with explicit data freshness, eligibility and request-budget controls.

PromoStudio: Approval-first AI campaign generation, scheduling and social-provider integration.

Recalibrate: Local-first mobile planning built around adaptive scheduling and supervised guidance.
